# What is Health Functional Food?

In Korea, all health functional foods distributed in the market are produced using ingredients that have undergone rigorous evaluations by the Ministry of Food and Drug Safety (MFDS), including human clinical trials and animal studies to verify their safety and efficacy.

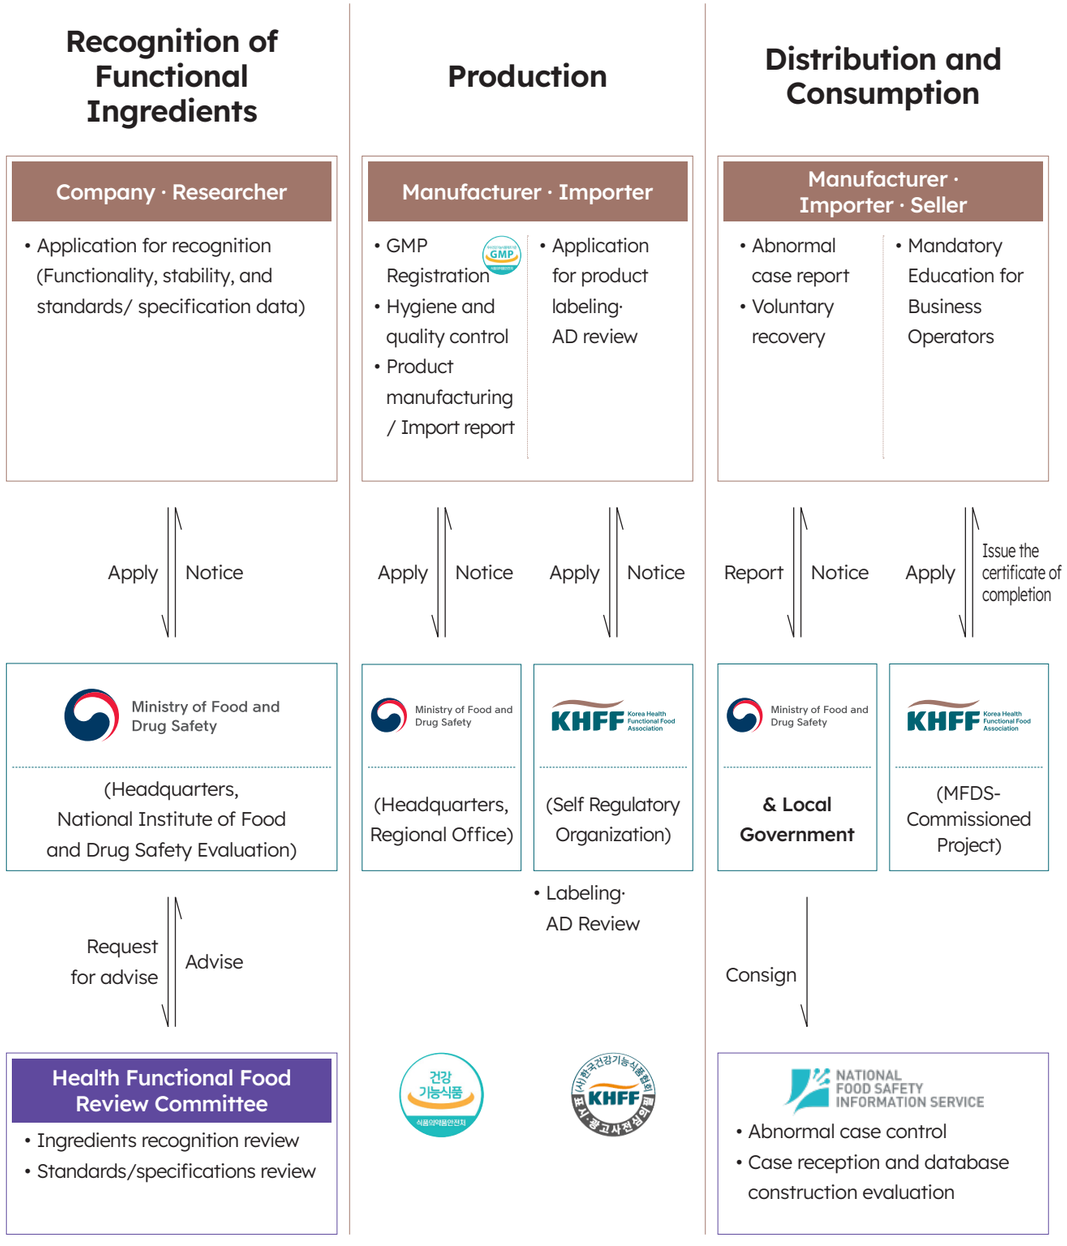

These products are manufactured in compliance with Good Manufacturing Practices (GMP) and are subject to strict post-market monitoring, including pre-approval of functional claims and advertising, as well as traceability systems to ensure consumer safety.

Only products that pass these processes are allowed to carry the official Health Functional Food certification mark and functional claims on their packaging.

*Legal basis : Acts on Health Functional Food

# Health Functional Food Management System

# Recognition Ingredient Types for Health Functional Foods

## Nutritional Components
(Authorized)

MFDS-standardized vitamins and minerals with defined functionalities and recommended daily intakes

*28 standardized nutrients, including 14 vitamins, 11 minerals, dietary fiber, proteins, and essential fatty acids, as defined

## Functional Ingredients
(Authorized)

Functional ingredients with established health claims and daily intake standards defined by the MFDS

*Examples : red ginseng, green tea extract, coenzyme Q10 etc. (Total : 68 types)

## Functional Ingredients
(Individually recognized)

Ingredients individually recognized by the MFDS for exclusive functional use

*Examples : collagen peptide, boswellia extract, ashwagandha extract etc. (358 Types as of Dec. 2024)

### Individually Recognized Ingredient System

A government approval system based on scientific evidence for functional ingredients.
Businesses may intends to obtain recognition from the Ministry of Food and Drug Safety (MFDS) for health functional ingredients they have developed, by submitting scientific data regarding specifications, safety, and functionality.
Once recognition is given, the ingredient can be used exclusively by the applicant.

* Scientific evidence from animal experimentation, in vitro experimentation and human studies is required to prove both safety and functionality.

## Approved Dosage Forms for Health Functional Foods

13 types

| | | | | | | |
|---|---|---|---|---|---|---|
| Tablet | Capsule | Pill | Granule | Powder | Liquid | Syrup |
| Soft capsule | Hard capsule | Jelly | Oral film | Gel | Chewable | |

*Sustained-release forms are allowed for water-soluble

## Health Functional Food Ingredient Information

• Access information on health functional food ingredients and related companies through Food Safety Korea.

## Health Functional Food Management System

### Quality Control of Health Functional Foods

- GMP certification mandatory for all domestic health functional food manufacturers (since 2022)
- Smart GMP system introduced in 2024 for automated recording and management.

### Prevention of False or Misleading Advertising

- Pre-approval of advertisements required to prevent consumer harm from false or exaggerated claims.

### Post-Market Surveillance and Management

- **Adverse Events** Business operators are required to report any adverse events that occur after consumption.
- **Re-evaluation** Functional ingredients are re-evaluated every 10 years (or sooner if issues arise).
- **Ad Monitoring** Ongoing monitoring and enforcement against illegal advertisements.

# About Korea Health Functional Food Association

KHFF Korea Health Functional Food Association

# Vision & History

## Vision

**Health Functional Foods**
**: A New High Value-added National Key Growing Industry**

## History

### Establishment and Stabilization

**Jan. 1990** Approved as a corporation by Ministry of Health & Welfare

**Aug. 2002** Enactment and promulgation of the Health Functional Food Act (legal basis of KHFF is under this act)

**Oct. 2003** Changing name to Korea Health Functional Food Association

**Jan. 2004** Designated as a institution reviewing health claims & ads and educating hygiene of health functional food

**Dec. 2004** Opening Korea Functional Food Institute (affiliated KHFF)

**Nov. 2007** Establishing Health Functional Food Future Forum

### Expansion and the Opening of the Global Era

**May 2012** Relocation to Pangyo

**Jan. 2017** Designated as a GMP training institution

**May 2017** Hosting 2017 IADSA annual conference

**Mar. 2019** Registered as a institution reviewing claims and ads on health functional food

**Feb. 2023** Changing english name and CI of association (CI)

**Aug. 2024** 20th Anniversary of the Enforcement of the Health Functional Foods Act

## Product / Ingredient Information

| | | |
|---|---|---|
| **Product / Ingredient Name** | CaraP-1™, Natural GLP-1 Supporter | **Product Image** |
| **Product Type (Functional Ingredient, Finished Product, etc.)** | Functional Ingredient | |
| **Main Material (Key Ingredients)** | Caralluma fimbriata extract | |
| **Main Health Benefits / Functional** | Supports weight management by promoting appetite suppression and supporting healthy GLP-1 activity | |
| **Composition** | - | |
| **Certifications** | GMP, HACCP, ISO9001, HALAL, KOSHER | |
| **Product Description** | Caralluma fimbriata is a  plant traditionally consumed in parts of India, valued for its resilience in arid environments and its naturally occurring bioactive compounds. It is rich in pregnane glycosides, which are believed to play a role in appetite regulation by influencing satiety signals in the body. Our research has linked Caralluma fimbriata to potential appetite-suppressing effects, supporting reduced caloric intake and contributing to weight management efforts. Additionally, our studies suggest it may have a supportive role in metabolic pathways associated with GLP-1 activity. | |
| **Key Features & Benefits** | • Sceintifically proven by in-vivo and human trial<br>• 2 publication under review<br>• Daily dose: 200 mg/day | |
